

ABSTRACT OF THE INVENTION

A demountable lampshade includes a plurality of shade piece, a connecting base and a plurality of mounting fixtures. Each shade piece has a frame body with a receiving portion formed thereon. The connecting base has a plurality of projecting
5 bars. Each projecting bar has a connecting portion at the end to connect with the receiving portion of each shade piece. The mounting fixtures are used to mount the shade pieces with each other to form a lampshade structure. Accordingly, the lampshade structure can be rapidly and easily disassembled for conveniently storing or transporting.
